

Task 5 – Basic File Encryption and Decryption

Title

Basic File Encryption and Decryption Using Python

Objective

To develop a Python program that encrypts and decrypts text using a simple encryption algorithm.

Tools Used

- Python
- Google Colab

Description

This project encrypts user-entered text by converting it into an encoded format and decrypts it back to the original text. It demonstrates the basic concepts of data security and encryption.

Features

- Encrypt text
- Decrypt text
- Simple and easy-to-use program
- Beginner-friendly implementation

Conclusion

This project helped in understanding basic encryption and decryption techniques using
